## **DETAILED ACTION**

### ***Claim Objections***

Claims 27-29 are objected to because of the following informalities: in line 1 of claim 27, should "27" be --28--. In line 1 of claim 28, should "28" be --29--. In line 1 of claim 29, should "29" be --30--.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 8, 10, 13 and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Wallace et al [(2A, 3) It should be noted that the element 408 in Fig. 3 is same as the element 408 in Fig. 2A].

Regarding claims 1, 2, 13 and 20, Wallace et al (2A, 3) discloses an amplifier circuit comprising a plurality of amplification units (408s in Fig. 2A) arranged in a grid like structure on a monolithic substrate (410), and a grid-bias network (-5V, +5V in Fig. 3) which separates the amplification units (408s) to provide a DC power (+5V, -5V) to the amplification units (408s) and wherein each amplification unit (408) includes bias-line bypass circuits (a connection between +5V and amplification unit and a connection between -5V and amplification unit) in a periodic structure.

Regarding claim 8, wherein each amplification unit (408) includes a power amplifier (508 in Fig. 3).

Regarding claims 10, 18 and 19, the amplification unit (408) further includes a receive antenna (502), a power amplifier (520) which receives a bias voltage (+5V), and the amplification unit (408) inherently includes a transmit antenna since the amplification unit (408) cannot transmit a signal without the transmit antenna.

***Allowable Subject Matter***

Claims 3-7, 9, 11, 12, 14-17 and 21-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Patent numbers (4,553,053; 4,074,151) are the plurality of amplifiers.
